*Election/Restrictions*

1. This application contains a plurality of disclosed patentably distinct species comprising:

(1) the specifics of the device and the process being comprised of a surface optical device apparatus with a plastic optical fiber comprising a first embodiment which corresponds to Figures 4-8;

(2) the specifics of the device and the process being comprised of a surface optical device apparatus with a lens portion comprising a second embodiment which corresponds to Figure 9;

(3) the specifics of the device and the process being comprised of a surface optical device apparatus in which the device is fabricated on a GaAs substrate comprising a third embodiment which corresponds to Figure 10;

(4) the specifics of the device and the process being comprised of a surface optical device apparatus in which a thick resist layer has a two-step structure such that the distance between the emitting surface of the surface emitting laser and the end face of the optical fiber can be appropriately regulated comprising a fourth embodiment which corresponds to Figure 11;

(5) the specifics of the device and the process being comprised of a surface optical device apparatus comprising a flat pattern of a thick resist layer comprising a fifth embodiment which corresponds to Figure 12;

(6) the specifics of the device and the process being comprised of a surface optical device apparatus wherein an optical fiber with a convex lens portion, a thick resist layer with a two-step

guide hole, and a light emitting diode are used comprising a sixth embodiment which corresponds to Figure 13;

(7) the specifics of the device and the process being comprised of a surface optical device apparatus wherein an optical fiber with a concave end face and a thick resist layer with a two-step guide hole are used comprising a seventh embodiment which corresponds to Figure 14;

(8) the specifics of the device and the process being comprised of a high-speed optical wiring device comprising an eighth embodiment which corresponds to Figure 15A-15C;

(9) the specifics of the device and the process being comprised of an electric connector with an electric connecting pin comprising a ninth embodiment which corresponds to Figure 16;

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 2882

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
